

# OmegaMount

## High Performance Magnetic Antenna Mounting System

Supports Single and Multiple Antennas per Mount

### Key Features

- **Magnetically Attaches to Water Tanks**
- Works with All Antennas
  - Cellular Panel - Parabolic - Whip - Yagi
- Permanent Attachment - Lifetime Warranty
- High Strength Ceramic Magnets
- Side and Top Mount Options
- Works on Flat and Curved Steel Surfaces
  - Water Tanks (*min. tank diameter is 50 ft*)
  - Elevator Penthouses
  - Steel Silos
  - Girders and I-Beams
- Magnetically Attached Cable Trays and Conduit
- 100% Zero Corrosion Guarantee
- Standard and Heavy Duty Models Available

**OmegaMount** permanently attaches to any steel structure with a minimum thickness of 0.25 in. A single mount can support parabolic antennas up to 6 ft in diameter, cellular panel and whip antennas. The mounts may be installed on the top or side of water towers or other steel structures.

Conduit and cable trays are also magnetically secured by with ceramic magnets allowing for rapid and professional installation.

OmegaMount does not require expensive welding and tank recertification - no draining water tanks - no internal tank paint blistering. Installing OmegaMount is straightforward. Once the magnets are set in place, the mount is permanent.

Composite materials significantly reduce weight allowing for greater antenna loads. All mounts will survive 140 mph winds at full antenna loading and exceed AASHTO requirements.
